

AUG 20 2007

Docket No. 740756-2702

Application No. 10/757,459

Page 2

IN THE CLAIMS:

1. (Currently Amended) A manufacturing method of a liquid crystal display device, comprising:

forming a seal material layer that surrounds a pixel area provided on a first substrate by ink-jet;

discharging a plurality of droplets containing a liquid crystal by ink-jet only on a region of the first substrate, the region being surrounded by the seal material layer;

pasting the first substrate and a second substrate; and

dividing the pasted first and second substrates,

wherein the plurality of droplets containing the liquid crystal are discharged by ink-jet on the region under reduced pressure.

2. (Currently Amended) A manufacturing method of a liquid crystal display device, comprising:

forming a first seal material layer that surrounds a pixel area provided on a first substrate by ink-jet;

forming a second seal material layer on a second substrate by ink-jet;

forming a liquid crystal layer by selectively discharging a plurality of droplets containing a liquid crystal by ink-jet only on a region of the first substrate, the region being surrounded by the first seal material layer;

pasting the first substrate and the second substrate; and

dividing the pasted first and second substrates,

wherein the plurality of droplets containing the liquid crystal are discharged by ink-jet on the region under reduced pressure.

3. (Withdrawn) A manufacturing method of a liquid crystal display device, comprising:

forming a first seal material layer that surrounds a pixel area provided on a first substrate;

forming a second seal material layer on a second substrate;

Docket No. 740756-2702
Application No. 10/757,459

forming a first liquid crystal layer by selectively discharging a plurality of droplets containing a liquid crystal only on a first region of the first substrate, the first region being surrounded by the first seal material layer;

forming a second liquid crystal layer by selectively discharging a plurality of droplets containing a liquid crystal only on a second region of the second substrate, the second region being surrounded by the second seal material layer; and

pasting the first substrate and second substrate so that the first and second liquid crystal layers contact and overlap one another.

4. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 1, wherein the plurality of droplets is discharged over a pixel electrode provided on the pixel area from a plurality of nozzles.

5. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 2, wherein the plurality of droplets is discharged over a pixel electrode provided on the pixel area from a plurality of nozzles.

6. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the plurality of droplets is discharged over a pixel electrode provided on the pixel area from a plurality of nozzles.

7. (Original) A manufacturing method of a liquid crystal display device according to claim 1, wherein the step of discharging the plurality of droplets containing the liquid crystal is carried out while the first substrate is heated.

8. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the step of discharging the plurality of droplets containing the liquid crystal is carried out while the first substrate is heated.

9. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the step of discharging the plurality of droplets containing the liquid crystal is carried out while the first substrate is heated.

Docket No. 740756-2702
Application No. 10/757,459
Page 4

10. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 1, wherein the steps of pasting the first and second the substrates is carried out in an inert atmosphere under an atmospheric pressure, or under reduced pressure.

11. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 2, wherein the steps of pasting the first and second the substrates is carried out in an inert atmosphere under an atmospheric pressure, or under reduced pressure.

12. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the steps of pasting the first and second the substrates is carried out in an inert atmosphere under an atmospheric pressure, or under reduced pressure.

13. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 1, wherein the plurality of droplets containing the liquid crystal are discharged over a pixel electrode under reduced pressure.

14. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 2, wherein the plurality of droplets containing the liquid crystal are discharged over a pixel electrode under reduced pressure.

15. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 1, wherein the step of discharging the plurality of the droplets containing the liquid crystal is preformed in an inert atmosphere under 1×10^2 Pa to 2×10^4 Pa.

16. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the step of discharging the plurality of the droplets containing the liquid crystal is preformed in an inert atmosphere under 1×10^2 Pa to 2×10^4 Pa.

17. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the step of discharging the plurality of the droplets containing the liquid crystal is preformed in an inert atmosphere under 1×10^2 Pa to 2×10^4 Pa.

Docket No. 740756-2702
Application No. 10/757,459
Page 5

18. (Original) A manufacturing method of a liquid crystal display device according to claim 1, wherein the step of discharging the plurality of the droplets containing the liquid crystal is preformed in a vacuum at 1 Pa to 5×10^4 Pa .

19. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the step of discharging the plurality of the droplets containing the liquid crystal is preformed in a vacuum at 1 Pa to 5×10^4 Pa .

20. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the step of discharging the plurality of the droplets containing the liquid crystal is preformed in a vacuum at 1 Pa to 5×10^4 Pa .

21. (Original) A manufacturing method of a liquid crystal display device according to claim 1, wherein the liquid crystal is applied intermittently.

22. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the liquid crystal is applied intermittently.

23. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the liquid crystal is applied intermittently.

24. (Original) A manufacturing method of a liquid crystal display device according to claim 1, wherein the liquid crystal is applied continuously.

25. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the liquid crystal is applied continuously.

26. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the liquid crystal is applied continuously.

27. (Original) A manufacturing method of a liquid crystal display device according to claim 1, wherein the liquid crystal display device is an active matrix type.

Docket No. 740756-2702
Application No. 10/757,459
Page 6

28. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the liquid crystal display device is an active matrix type.

29. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the liquid crystal display device is an active matrix type.

30. (Original) A manufacturing method of a liquid crystal display device according to claim 1, wherein the liquid crystal display device is a passive matrix type.

31. (Original) A manufacturing method of a liquid crystal display device according to claim 2, wherein the liquid crystal display device is a passive matrix type.

32. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the liquid crystal display device is a passive matrix type.

33-34. (Canceled)

35. (Withdrawn) A manufacturing method of a liquid crystal display device according to claim 3, wherein the step of discharging the plurality of droplets containing the liquid crystal is carried out by ink jet.

36-38. (Canceled)

39. (Original) A method according to claim 1, wherein the liquid crystal display device is incorporated with an electronic device selected from the group consisting of a personal computer, a mobile computer, a CD player, a DVD player, a portable book and a display device.

40. (Original) A method according to claim 2, wherein the liquid crystal display device is incorporated with an electronic device selected from the group consisting of a personal computer, a mobile computer, a CD player, a DVD player, a portable book and a display device.

Docket No. 740756-2702
Application No. 10/757,459

41. (Withdrawn) A method according to claim 3, wherein the liquid crystal display device is incorporated with an electronic device selected from the group consisting of a personal computer, a mobile computer, a CD player, a DVD player, a portable book and a display device.

42. (Canceled)

43. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 1, wherein the first substrate is formed from a plastic substrate and the second substrate is formed from a plastic substrate.

44. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 1, wherein a column spacer formed of resin is formed between the first substrate and the second substrate.

45. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 2, wherein the first substrate is formed from a plastic substrate and the second substrate is formed from a plastic substrate.

46. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 2, wherein a column spacer formed of resin is formed between the first substrate and the second substrate.

47-48. (Canceled)

49. (Currently Amended) A manufacturing method of a liquid crystal display device, comprising:

forming a seal material layer that surrounds a pixel area provided on a first substrate by ink-jet;

discharging a plurality of droplets containing a liquid crystal by ink-jet only on a region of the first substrate, the region being surrounded by the seal material layer;

pasting the first substrate and a second substrate under reduced pressure; and

Docket No. 740756-2702
Application No. 10/757,459
Page 8

dividing the pasted first and second substrates,
wherein the plurality of droplets containing the liquid crystal are discharged by ink-jet
from a plurality of nozzles ~~while moving the plurality of nozzles~~ which move.

50. (Currently Amended) A manufacturing method of a liquid crystal display device,
comprising:

forming a first seal material layer that surrounds a pixel area provided on a first
substrate by ink-jet;

forming a second seal material layer on a second substrate by ink-jet;

forming a liquid crystal layer by selectively discharging a plurality of droplets
containing a liquid crystal by ink-jet only on a region of the first substrate, the region being
surrounded by the first seal material layer;

pasting the first substrate and the second substrate under reduced pressure; and

dividing the pasted first and second substrates,

wherein the plurality of droplets containing the liquid crystal are discharged by ink-jet
from a plurality of nozzles ~~while moving the plurality of nozzles~~ which move.

51. (Previously Presented) A manufacturing method of a liquid crystal display device
according to claim 49, wherein the step of discharging the plurality of droplets containing the
liquid crystal is carried out while the first substrate is heated.

52. (Previously Presented) A manufacturing method of a liquid crystal display device
according to claim 50, wherein the step of discharging the plurality of droplets containing the
liquid crystal is carried out while the first substrate is heated.

53-54. (Canceled)

55. (Previously Presented) A manufacturing method of a liquid crystal display device
according to claim 49, wherein the plurality of droplets containing the liquid crystal are
discharged over a pixel electrode under reduced pressure.

Docket No. 740756-2702
Application No. 10/757,459
Page 9

56. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 50, wherein the plurality of droplets containing the liquid crystal are discharged over a pixel electrode under reduced pressure.

57. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 49, wherein the liquid crystal is applied intermittently.

58. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 50, wherein the liquid crystal is applied intermittently.

59. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 49, wherein the liquid crystal is applied continuously.

60. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 50, wherein the liquid crystal is applied continuously.

61. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 49, wherein the liquid crystal display device is an active matrix type.

62. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 50, wherein the liquid crystal display device is an active matrix type.

63. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 49, wherein the liquid crystal display device is a passive matrix type.

64. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 50, wherein the liquid crystal display device is a passive matrix type.

65-66. (Canceled)

67. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 49, wherein the plurality of droplets containing the liquid crystal are discharged on the region under reduced pressure.

Docket No. 740756-2702
Application No. 10/757,459
Page 10

68. (Previously Presented) A manufacturing method of a liquid crystal display device according to claim 50, wherein the plurality of droplets containing the liquid crystal are discharged on the region under reduced pressure.

69. (New) A manufacturing method of a liquid crystal display device, comprising:
forming a seal material layer that surrounds a pixel area provided on a first substrate by ink-jet;
forming an alignment layer over the first substrate by ink-jet;
discharging a plurality of droplets containing a liquid crystal by ink-jet over a region of the first substrate, the region being surrounded by the seal material layer;
pasting the first substrate and a second substrate under reduced pressure; and
dividing the pasted first and second substrates,
wherein the plurality of droplets containing the liquid crystal are discharged from a plurality of nozzles which move.

70. (New) A manufacturing method of a liquid crystal display device according to claim 69, wherein the step of discharging the plurality of droplets containing the liquid crystal is carried out while the first substrate is heated.

71. (New) A manufacturing method of a liquid crystal display device according to claim 69, wherein the plurality of droplets containing the liquid crystal are discharged over a pixel electrode under reduced pressure.

72. (New) A manufacturing method of a liquid crystal display device according to claim 69, wherein the liquid crystal display device is an active matrix type.

73. (New) A manufacturing method of a liquid crystal display device according to claim 69, wherein the liquid crystal display device is a passive matrix type.

74. (New) A manufacturing method of a liquid crystal display device according to claim 69, wherein the plurality of droplets containing the liquid crystal are discharged on the region under reduced pressure.
